CAPITAL SUDGET.

THE PRESIDENT S POWER OF REMOVAL. Washing con, July 11.—The supreme court of the District of Columbia, sitting in princeral term, today, sustained the de-Paurrer of the government and awarded a judgment in favor of Custer in the case of the United States against John N. Oliver, the United States against John N. Oliver, a justice of the peace, who resisted the right of the president to remove him and claimed that he could be displaced from office only by the District supreme court. The court, in opinion delivered by Chief Instice Bingham, holds that the power to remove justices of the peace resided in the president alone down to the organic act of the court passed on March 10, 1886, and e court passed on March 10, 1886, and that this act could not take away the president's power of removal, out merely conferred on the court concurrent power of removal with the president.

A PROPESSIONAL SQUABBLE. Last spring Surgeon General John B. Hamilton, of the Marine hospital service, preferred charges to the cattle association against Dr. Sowers of unprofessional con-duct in criticising publicly, from a medical point of view, the manner of living of the president. Dr. Sowers has now preferred charges against Dr. Hamilton of having violated the association's regulations in having shown to ex-Representative Hazelton the charges which he was about to prefer against him (Dr. Sowers) last April. This was done, it is charged, with the full knowledge that Mr. Hazelton and his family were patients of Dr. Sowers, and was intended to lower him in the estimation of his patients. The case of Dr. Sowers has not been formally disposed of, but the result of investigation by the committee is equivalent to acquittal. It requires two-thirds to convict and ununless this number favor conviction it is not deemed necessary to make report to the association. Two thirds did not vote guilty, a majority and minority report was made and there the matter rests,

POSTAL ARRANGEMENT WITH MEXICO. Minister Romero has informed Mr. Bell, superintendent of foreign mails, that the Mexican government has accepted the proposition of the post office department for the inauguration of a through rotary lock pouch register system between the United States and Mexico similar to the one now in use between the United States and Can-At present, however, this exchange will be limited to the city of New York and city of Mexico with the understanding that it will be gradually extended to other post offices in the two countries.

By this arrangement registered matter between these two cities will be expedited about four days, as it will not be subject to inspection and handling at ElPaso and Paso del Norte, which heretofore occupied about two days in each office. The new service will go into operation as soon as the Mexican government can provide necessary equipment, probably by August.

Queen Kapi's Kingdom.

New York, July 11.—Col. J. H. Boyd, Queen Kapiolani's private secretary, said today: "We succeeded in floating the loan of \$2,000,000 with English bondholders who have in the past interested themselves in Hawatian interests. The bonds were issued by the Hawatian government.

The story of the revolution in the island so reported in the papers looks a little crooked to me. Our minister received in the papers detailed for August and September delivery and that the no notification of the occurrence detailed for August and September delivery and that the in the papers and it seems very strange that the has such large interest in the islands, should be in San Francisco talking about the occurrences which are reported as now going on the islands. The queen is not in the least alarmed about the pres-

Chicago Grain and Provisions.

CHICAGO, July 11 The wheat market opened actively and with showing of greater strength, partly due to higher prices on the New York market. August started % higher at 73%. The Saturday talk of a decrease in the visible supply was continued this morning with re or less of a builish effect, at least enough to hold August up to 73%@73%, where it remained wit a good deal of persistency. After the first hour or s the session local interest in the market rather die visible supply as announced proved a decrease of only 1.426,000 in wheat, which though less than was expected was still enough to hold values steady and irm. During the last half hour sellers were pretty free about offering wheat and prices gradually eased back to 73% where the market closed.

Corn was only moderately active, but a fair vol ume of trade was reported. Early in the day there was a fair demand from the local shorts and the market ruled quite firm, opening at 14c higher tha than the closing figures of Saturday. After fluctuating for some time. This advance was left and the market closed about 1% cent lower than Saturday. August sold at 36% at the opening and 36% at the close.

Oats were quiet today; August ranged 25% and 2%. entracts had centered in the hands of a promioperator was the main support of the market in general way and caused a sharp advance in price Other articles sympathized to some extent and with this movement and prices were slightly advanced with only moderate trading. August short rib started at 7.0 sold up to 7 8736 and closed at 750.

The leading futures ranged as follows: Ranged 3574963134

Enterprise in Business The American business man may not ay claim to his knowledge of literature and the fine arts, but what is infinitely of more value to him, he knows his trade and his men. He may be slow at logic, but he darts at chances. He shapes himself to every exigency, and is continually switching into new tracks. To the spirit of enterprise more than to any other element in business life; has been due that d progress of America that has p all the institutions of our country so far above those of any nation in the world. And nothing should prove so healthful or more stimulating to the young man enter-ing into commercial life than this con-dition of affairs. The spirit of the times demands of him that he must from the very start be alert to discover new ways in business and find new methods by which undertakings can be carried out a hundred times quicker than a year ago. A safe policy for adoption in modern times is to stick to the old method as the right policy, so long as no better way pre-sents itself. But when that new way is discovered haste should be made to improve it. Men are no longer made, as in times of old, but make themselves by their own efforts and energies. True en-terprise is constantly on the alert to discover some new want of society, some fertile source of profit or honor, some unexplored avenue of business, and is ready to supply the one or take advantage of the other.-Magazine Exchange.

Heat as a Purifier. Fire is a thorough purifier. Two hundred and twelve degrees of heat, according to Fahrenheit, is the lowest degree to which it is safe to expose infected meat, and as all kinds of meat are always subject to more or less disease, or worms, invisible, it may be, to a common microscope, it is not safe to eat any kind, unless cooked by applying 212 degs. F. Heat is a complete remedy for many things. Heat is a great purifier as well as sweetener of food and drink. Germs of disease are lurking in many things. Water from sluggish streams, pools or sloughs should never be used until boiled. It is nearly always full of disease or injurious ani-malculae. By boiling, settlers in new countries, where pure, living water can-not at first be had, might be exempt from many protracted or even fatal diseases. When potatoes, apples and other vegetables are rotting, the sound parts should not be eaten raw, as the fungus or disease with which they are decaying is frequently poison to the human system. And it is probable that many of the malarial diseases, such as fever and ague, neuralgia, etc., could be avoided by strictly using cooked food and water purified by heat. The microscope is revealing wonders in the science of medicine, in anatomy, in physiology and in nearly all the natural sciences. The atomic theory is having an increasing throng of adherents.-Boston Budget.

"Rather particular, wasn't hest remarked the reporter to a jeweler, referring to a man of sporting proclivities who had just purchased a horseshoe scarf pin had just purchased a norsestate after hunting over the entire stock. "Men

who follow the turf are all more or less superstitious. The horseshoe pin is a great favorite with them, but they all vant one with seven nails in it. The majority of pins have four nails on each side, so the ones with only seven soon get picked out. A turfman is ashamed to acknowl-edge that he is superstitious, and will go out without buying sooner than admit what he is looking for. Seven was considered a lucky number by the ancients, and has come down as such to the present and has come down as such to the present generation. Often a man will take a liking to a pin with eight nails in it and then have us spoil it by knocking one of them out. It is merely a foolish superstition."

The pin the jeweler wore had only seven nails in it.—New York Sun.
